
Jonathan Biro

QA Automation Engineer / SDET

Los Angeles, CA | jonathan@biro.dev
github.com/jonbiro | linkedin.com/in/jonathanbiro

PROFILE

Quality engineering and frontend development across patient-facing websites, accessible web experiences, and interactive browser products. Focused on reproducible failures, useful automated checks, and complete user journeys.

CORE CAPABILITIES

Playwright, TypeScript, JavaScript, React, Next.js, UI and API testing, GitHub Actions, accessibility checks, responsive behavior, static-export validation, and browser interaction testing.

SELECTED INDEPENDENT PROJECTS

BiroMD | Healthcare website - frontend and quality engineering

Built patient-facing routes and consultation paths using Next.js and TypeScript. Added browser checks for theme contrast, mobile navigation, and office links; export checks for routes, sitemaps, links, and image budgets. Clinical derivatives use an explicit publication allowlist.

biromd.com | github.com/jonbiro/BiroMD

QA Portfolio | Accessible product and interaction design

Built keyboard navigation, focus-managed dialogs, system-aware motion controls, and a local defect-diagnosis exercise. Added behavior tests for interaction states, timers, and score persistence, with coverage gates and production checks in CI.

Puppy Quest | Browser game and interaction engineering

Developed a browser adventure with keyboard and touch controls, collision behavior, checkpoints, retries, and local progress. The project explores timing boundaries and state recovery in interactive products.
